

Under-stem Channel

HCR Headset & Stem System

The HCR system (Hidden Cable Routing) hides the brake hoses from view without enclosing them in the stem or spacers for easier installation, maintenance, and travel. With its aluminum spacers and fully sealed design, HCR gives the clean look of internal cables without the downsides often associated with it.

- Clean, traditional aesthetic
- High polish finish
- Aluminum spacers and top cover
- Cable Seal prevents water and dirt ingress into headset
- Stainless steel HELLBENDER bearings
- Reduces cost of ownership for bikes with internal routing
